

FELCON FE1030 horizontal centrifuge line

The Felcon FE1030 horizontal centrifuge is particularly suitable for centrifuging delicate fruit and vegetables, as the infeed is almost horizontally, so there is almost no falling height. This processing line has a very limited footprint, so is particularly interesting if the available space on your production site is limited.

The layout drawing of this centrifuge line is showing a standard configuration.

Furthermore Felcon would be happy to integrate the centrifuge line into your total line concept.

Features:

- Fully automatic drying line.
- Suitable for processing lettuce, fruit and vegetables.
- Small footprint.
- High production capacity.
- Fully programmable HMI controlling the line.
- Electrically driven, no hydraulics.
- Heavy duty construction.
- Hygienic execution.
- Easy to clean.
- Maintenance friendly.
- Belts with hinged sideboards.

Optional:

- Tailor made engineering.
- Remote access.

Capacity:

The capacity depends on the type of product you would like to process, the input, and the output.

Let's have a talk to find the best fitting centrifuge for your company!
